

Thank you for giving us the opportunity to present the **Machtech** NC Pressbrake to you.

Specialist Machinery Sales supplies a range of new and used sheetmetal working machinery to the sheetmetal and fabrication industry here in Western Australia. We represent several manufacturers from around the world and as such offer machines to satisfy a wide range of applications, from conventional machines ideal for small volume production or "jobbing shops" to the latest in CNC technology for shops where "productivity plus" is the name of the game.

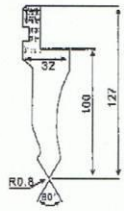

But supplying competitively priced, reliable machinery is only part of the story. We believe we need to offer complete support to the machines we represent and sell. As such we offer full technical support and advice on the machines we supply, as well as on site technical service and training, plus spare parts and tooling. All of this will enable our clients to get maximum results from the machine supplied, whether it is new or used.

The quotation attached CPB stands for '**Crowning Press Brake**'. The NC shows it is a simple **NC control** ie digital display of depth and backgauge position, just a one off setting, no programs. **NCD** means it has a **Delem DA41** Controller so is programmable and the controller **permits angle programming** as a function of material thickness and the tooling library. The NCD also has **ballscrew backgauge and servo motors** for faster operation and **better positional accuracy**. All machines are fitted **with Lasersafe Guards**.

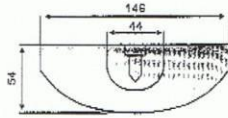

These machines have a **hydraulic Crowning System** in the lower bed, by means of a three plate design and hydraulic cylinders acting on the centre plate with respect to the outer two plates. To set the amount of crowning the operator will need to adjust the hydraulic valve associated with this, exactly as he would set the pressure for the pressbrake pressing force (a hand valve on the side frame of the machine with a corresponding pressure gauge).

Listed below are the standard tooling (a full length multi vee die) and the Euro Style Top Tool. We also stock alternate top tools from this factory for those clients who find European Prices Prohibitive! For the Machines 125 Tonnes and 160 Tonnes the die is WA50-88-86 For the Machines 200 Tonnes the die is WA60-86 The top tools we are getting as standard are WA10-86

Crowning and main pressure adjustment 200T mechanical balance torsion bar

Crowning covers removed

Tooling ex stock

Basic DRO controller for (NC) pressbrake Laser safe guarding 200T standard tooling

SMS appreciate the opportunity to offer a quotation on the Machtech NC hydraulic pressbrake and hope you will find the information provided in this proposal to be of assistance to you and your Company. We have these machine **EX STOCK** in **Melbourne and China** and would invite you to inspect the machine when available to do so. There are larger 300T and smaller size machines also available ex stock for your consideration.

Alternatively if your company would like some prices on CNC pressbrakes please let us know as we have a Machtech, Durma or LVD solutions to present to your company with references of each machine working in your state. Alternatively we can supply a range of used machinery that is stocked interstate or overseas.

Please let me know when you are free to discuss the tooling for your pressbrake. We can also offer tooling from China as quoted or from Rolleri, Ferrari, Raxo, Euram, Willa or LVD. Appropriate tooling will enable your company to get the most of your investment in a pressbrake. **As a special in 2009 we are offering 25% off the list price of Rolleri tooling from Italy when tooling is purchased for a new Machtech pressbrake.**

The prices quoted are for machines delivered directly from China stock to avoid road freight from Melbourne. Delivery will be four weeks. Crane, local transport and installation are included subject to a site inspection. The 100T machines are quoted 12 weeks delivery ex China as we are stocking the 125T in Melbourne and China as this size is more popular than the 100T machines.

These machines will be applicable for the 50% depreciation allowance as part of the Federal Government economic stimulus package for orders placed before December 30, 2009 if your company turns over less than \$2m / year and the machine is installed before the end of 2010.

If you have any questions regarding this proposal please contact me on (08) 6468 6253. I will be glad to be of further assistance.

Yours faithfully,
